NOTE 8

# LOCKOUT/TAGOUT

## De-Energizing Equipment

1. **Preparing for shutdown:** authorized employee must know the type, magnitude, location and methods for controlling the energy. All affected employees should be notified that the equipment is being shut down.
2. **Turn off the equipment by normal stopping procedures:** isolate the equipment from its source of energy by pulling the plug, turning off other switches or removing valves, etc.
3. **Release any stored energy** (such as suspended parts or pressure buildup in hoses, etc.) or restrain stored energy by methods such as repositioning, blocking, bleeding down, etc.
4. **Lockout and/or tagout** all the energy-isolating devices (circuit breakers, switches with designated lockout (locks) or tags!). This tells everyone who you are as well as what you're doing, in order to instructing them not to restore energy.
5. **Make sure** that energy has been disconnected by turning machine on. Return the controls to the "off" position.

## Re-Energizing Equipment

1. **After the work is completed** on the equipment, remove all tags, restore all controls, clear all employees and remove the lockout/tagout devices.
2. **Inform** all affected employees that work has been completed and power has been restored.
3. **Restore energy** to the equipment connecting the energy source and turning on the operating switches or buttons.

**Follow lockout/tagout procedures: your life and the lives of others depend on it.**
